TROPICAL CYCLONE BULLETIN NR. 5

Typhoon UWAN (FUNG-WONG)

Issued at 5:00 PM, 08 November 2025

Valid for broadcast until the next bulletin at 11:00 PM today.

TRACK AND INTENSITY OUTLOOK

- **Heavy rainfall, severe winds, and storm surge may still be experienced in localities far from the landfall point and outside the forecast confidence cone. Refer to “Other Hazards affecting Land Areas” for more details. Furthermore, the track may still shift within the limit of the forecast confidence cone.**
- UWAN is forecast to move west northwestward today and tomorrow (9 November) before turning generally more northwestward on Monday (10 November). On the track forecast, the center of the eye of UWAN may **pass close to Catanduanes** tomorrow morning and **make landfall over the northern or central portion of Aurora** tomorrow (09 November) evening or Monday early morning. Furthermore, **there is also an increasing possibility of a slight southward shift in the projected path of UWAN, which may result to a direct hit (i.e., eyewall affecting the area without making landfall) or a landfall scenario over Catanduanes.**
- After landfall, UWAN will traverse the mountainous terrain of Northern Luzon and emerge over Lingayen Gulf or the coastal waters of Pangasinan or La Union on Monday morning or afternoon.
- UWAN is forecast to rapidly intensify and may reach super typhoon category tonight or tomorrow, although the potential for a much faster intensification is not ruled out due to favorable environment. It may also make landfall at or near its peak lifetime intensity. The interaction with the terrain will cause UWAN to weaken significantly, but it is expected to remain as a typhoon throughout its passage over Northern Luzon.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 11:00 PM today.
