TROPICAL CYCLONE BULLETIN NR. 2

Typhoon UWAN (FUNG-WONG)

Issued at 11:00 PM, 07 November 2025

Valid for broadcast until the next bulletin at 5:00 AM tomorrow.

TRACK AND INTENSITY OUTLOOK

- **It must be emphasized that heavy rainfall, severe winds, and storm surge may still be experienced in localities outside the landfall point and the forecast confidence cone. Refer to “Other Hazards affecting Land Areas” for more details. Furthermore, the track may still shift within the limit of the forecast confidence cone.**
- UWAN is forecast to move west northwestward until Monday (10 November) before turning generally north northwestward by Tuesday (11 November). On the track forecast, the center of UWAN may make landfall over the southern portion of Isabela or the northern portion of Aurora on Sunday (09 November) late evening or Monday early morning. After landfall, UWAN will traverse the mountainous terrain of Northern Luzon and emerge over the West Philippine Sea on Monday morning or afternoon.
- UWAN is forecast to rapidly intensify and may reach super typhoon category tomorrow evening or Sunday morning. It may also make landfall at or near its peak lifetime intensity. The interaction with the terrain will cause UWAN to weaken, but it is expected to remain as a typhoon throughout its passage over Northern Luzon and West Philippine Sea.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**
